

ch7

1)

a) Predict the values of sum1 and sum2 if the operands in the expressions for sum1 and sum2 are evaluated left to right.

Sum1 = 46, sum2 = 48

b) Predict the values of sum1 and sum2 if the operands in the same expressions are evaluated right to left.

Sum1 = 48, sum2 = 46

c) Predict the values of sum1 and sum2 if functions are evaluated first.

Sum1 = 48, sum2 = 48

d) Compile with g++ and run the program on pluto or your favorite c++ environment, what are the values for sum1 and sum2?

Sum1 = 46, sum2 = 48

2)

a) What would be the output if you compile with g++ and run the program on Pluto?

A = 20 and x = 12

b) Is the program output in line with your conclusion above about operand Evaluation order? Why or why not?

Yes it was consistent with my prediction where they are evaluated from left to right, but it will differ based on the runtime environment you use. (based on class feedback)

ch9

- a) Call by value: $X = 6$, $Y = 11$
- b) Call by value result: $X = 15$, $Y = 20$
- c) Call by reference: $X = 16$, $Y = 21$
